The application has been amended as follows:

17. (Currently Amended) A method for detecting a malicious call, comprising:
receiving, by a signaling unit, a first call request of a calling terminal;
sending a second call request from the signaling unit to a called terminal device,
the called terminal device operates according to a session initiation protocol;
enabling a data transmission between the calling and called terminal device;
transmitting user data between the calling terminal device and the called terminal device; receiving a detection request in order to detect the malicious call of the calling terminal, the detection request initiated by a user of the called terminal and formed according to the session initiation protocol;
noting, by the signaling unit, an identifier for the calling terminal device; and

storing the identifier permanently in a memory unit after receiving the detection request;

wherein the called terminal device is a terminal device in a data packet transmission network, and

wherein the signaling unit performs signaling between the signaling unit and the called terminal device in accordance with the session initiation protocol,

wherein the detection request is transmitted in an INFO message using the INFO method according to RFC 2976, and that a header section of the INFO message or a body section of the INFO message contains an information element which serves to uniquely identify the detection request.

27. (Canceled)

37. (Currently Amended) A session initiation protocol terminal device for detecting electronic calls, comprising:

a connection unit for connecting the session initiation protocol terminal device to a data packet transmission network; and

a control unit containing a function that generates a detection request automatically at the instigation of a person operating the session initiation protocol terminal device, the detection request generated according to a session initiation protocol and subsequently sent to a signaling unit, and when the detection request is

processed the signaling unit notes an identifier of a terminal device calling the terminal device,

wherein the detection request is in order to detect a malicious call from the terminal device calling the terminal device, and

wherein the detection request is generated in an INFO message using the INFO method according to RFC 2976, and that a header section of the INFO message or a body section of the INFO message contains an information element which serves to uniquely identify the detection request.

38. (Canceled)

39. (Currently Amended) A signaling unit for detecting electronic calls, comprising:

a control unit that signals and provides a function that automatically notes an identifier of a terminal device calling the called terminal device;

a session initiation protocol used to provide signaling between the signaling unit and the called terminal device, and

a detection request message from the called terminal device, the message indicating that the call from the calling terminal device is a malicious call, the detection request formed according to a session initiation protocol,

wherein the detection request is generated in an INFO message using the INFO method according to RFC 2976, and that a header section of the INFO message or a

body section of the INFO message contains an information element which serves to uniquely identify the detection request.
